Trinity Chemicals uses veriTAG in China to ensure quality and authenticity of products

Trinity Chemicals, a maker of varnish and cleaning chemicals used in global handheld tool manufacturers like Bosch and Keyang Powertools, and in the semiconductor industry by companies within the ANST, Diode and SPIL, has procured the veriTAG technology.

In their business, quality and reliability of products in use, means everything and quality service to reputable clients with reliability instills confidence and secures long-term business.

Using veriTAG to tag, authenticate, track and audit their products in use at customer locations, ensures that products are genuine and prevents spurious and fake products entering the supply chain.

After extensive proof of concepts and field trials, Trinity Chemicals believe that veriTAG serves as the best form of authenticity check.

Today veriTAG is used in several of their product lines: TS-300, 3041-2 and 9006.

veriTAG is a unique patent pending technology that uses a combination of smart tags, mobile and cloud technology, and is used by companies in many industries, to ensure that products are not tampered with in any nor counterfeiting in the markets they sell in.

veriTAG Pte Ltd has its headquarters in Singapore, offices in China and Canada, and partners in several other countries globally.
